1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pedrazzini in view of Plunkett (as cited by applicant) and Lannes et al and Dunfield. Pedrazzini discloses motor generating bemf, controller for controlling speed of motor, circuitry allowing controller to sample bemf of motor where controller uses sampled bemf as feedback for controlling speed, see Pedrazzini col 2 lines 20-28, col 4 lines 39-44 and col 5 lines 19-35. Pedrazzini does disclose decay time, but not specific times. There is nothing special about the specific decay time as cited in dependent claims. Pedrazzini lacks disclosing average of sampled bemf, valve and damper vane and nominal value and measured speed for calibration. Plunkett discloses average value of sampled bemf see col 2 lines 55-65. Lannes et al discloses damper vane and valve see page 2 paragraphs 17 & 18. Dunfield discloses nominal value and measured speed for calibration see col 10 lines 42-60. It would have been obvious to one of ordinary skill in

the art to combine control of Pedrazzini with average sampling of Plunkett, damper vane and

motor control.
